INCLUSIVE & ACCESSIBLE HIRING SYSTEM

Introduction

Hiring systems increasingly rely on automated screening, yet many platforms reinforce bias, lack transparency, and fail to support applicants with disabilities or non-traditional career paths. The Inclusive & Accessible Hiring System addresses these issues through a fair, WCAG-compliant platform that uses ethical AI for unbiased resume evaluation, secure accommodation disclosure, and explainable decision-making. By prioritizing inclusivity and accountability, the system promotes equitable employment and strengthens trust in modern recruitment.

User Features

Our inclusive hiring platform provides accessible, user-centered features for applicants, recruiters, and HR teams. Applicants can securely upload resumes, disclose accommodations, get real-time feedback, and track applications via an intuitive dashboard. Recruiters benefit from AI-assisted resume parsing, skills-based matching, and transparent ranking explanations. Built-in accessibility tools—screen-reader friendly layouts, adjustable text, keyboard navigation, and high-contrast modes—ensure usability for all. HR teams can access audit logs, monitor fairness metrics, and generate compliance reports to support ethical, transparent, and inclusive hiring practices.

COOL NAME 😎

Purpose

The purpose of IAHS is to modernize the recruitment process by creating a platform that prioritizes fairness, accessibility, and transparency at every stage of candidate evaluation. The system reduces bias in resume screening through AI-assisted parsing, provides clear explanations for all automated decisions, and empowers both candidates and recruiters with greater control and visibility.

It ensures organizations meet essential compliance standards such as WCAG 2.1 AA, GDPR, PIPEDA, and AODA, making the hiring workflow legally aligned and accessible to users with diverse abilities. By separating sensitive data, generating tamper-proof audit logs, and enforcing strict role-based access, the platform builds trust, strengthens accountability, and supports inclusive hiring practices that reflect modern ethical and regulatory expectations.

Societal Impact

Our inclusive hiring platform promotes equitable hiring by reducing algorithmic bias, improving accessibility for users with disabilities, and increasing transparency in automated decisions. It helps organizations meet WCAG 2.1 AA, GDPR, PIPEDA, and AODA compliance. The system strengthens trust in recruitment processes and supports diverse and underrepresented groups.

Solution Design

InclusiveHire is a standalone web platform designed to streamline and strengthen the hiring process through AI-powered resume parsing, transparent decision-making, and secure accommodation disclosure. The system features an accessible interface that supports screen readers, keyboard-only navigation, and high-contrast viewing to ensure usability for all applicants. Its explainable AI engine provides one-sentence shortlist rationales, detailed feature-importance logs, and options for recruiters to override or correct AI decisions when necessary. All sensitive data is protected through encrypted storage, separated accommodation databases, and comprehensive audit logs that maintain accountability. To support the needs of different stakeholders, InclusiveHire includes role-specific dashboards for applicants, recruiters, hiring managers, and HR/DEI teams, ensuring that each user has access to the tools and information relevant to their responsibilities.

Future Expansion

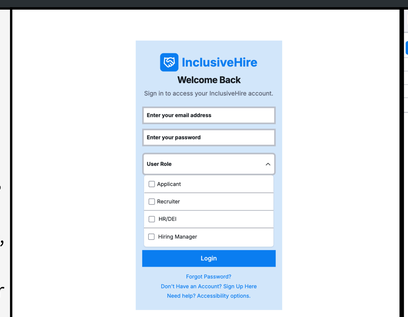

Future expansion for InclusiveHire includes adding AI-powered job-fit recommendations that match candidates to multiple suitable roles, as well as introducing structured (non-audio, non-video) interview insights to support fair and consistent evaluation. The platform will also extend its multilingual interface beyond English and French to better serve a diverse and global user base.
